

The AI System Starter Kit

3 prompts that turn AI from a search box into a system for your business.

By **Eric Beer** · Entrepreneur, 20+ years in marketing, builds with AI every day

Most people use AI like Google. Ask a question, get an answer, close the tab.

That's not where the value is. The value is when AI helps you build systems that do real work in your business, every day, without starting from zero each time.

You don't need to be techy. I'm not. I've built apps, AI agents and automations with these exact prompts. Use them in ChatGPT, Claude, or whatever AI you like. **Use them in order.**

1 Find the problem worth solving

Don't start with the tool. Start with the outcome.

COPY THIS IN

I own a business that helps **[who you help]** with **[what you help them do]**.

Ask me questions, one at a time, about what my team and I do every week: getting leads, following up, creating content, answering emails, proposals, onboarding, reporting, customer service, and anything else that takes time.

When you're done asking, give me a list of the 5 tasks AI could take over or speed up the most, ranked by how much time and money they'd save me. For each one, tell me why.

Pick the top one. That's your first system.

When you get stuck (you will)

TYPE THIS

I don't get it. Remember, I have the knowledge of a 10-year-old. Tell me exactly what to do next.

You don't need the perfect prompt. You just need to ask the right questions.

2 Make the AI ask you the right questions

Most bad AI answers come from vague prompts. Flip it. Let the AI figure out what it needs to know.

COPY THIS IN

I have a business that helps **[who]** solve **[problem]**.

I want to use AI to automate and solve this specific problem: **[the task from Prompt 1]**, so that **[the result you want]**.

Before you tell me how to do it, tell me what questions I should answer so you can give me the best possible plan. Ask them one at a time.

Answer every question. Short answers are fine.

3 Get the step-by-step blueprint

Now that it knows your business, ask for the plan.

COPY THIS IN

Treat me like I'm 10 years old. In a very simple way, give me a detailed step-by-step process for how to do this. Don't assume I understand business or technology.

Map out exactly what I should do, what tools I need, what skills are required, and how I can get help if I need it. Don't leave anything out and don't assume anything.

You'll get a blueprint. Then do the project with the AI, one step at a time.

What's next

Tomorrow I'll send you what I'm building with AI right now and what's working. One short email a day.

Hit reply and tell me the first problem you're going to solve. I read these.

Eric
